

BigStuff GEN4 – NOS Solid State Relay Staged Control - Wiring Diagram

The GEN4 ECU Staged NOS setup can be controlled for each nitrous stage through a Bosch style relay or a solid state relay. Solid state relays typically have a faster reaction time than a Bosch style relay. You run one solid state relay per nitrous stage you are controlling.

!!IMPORTANT! The ECU outputs a ground trigger! Do not send 12vdc into the ECU or it can be damaged.
